

**In the Claims**

2       Claims 1-38 were originally filed.

3       Claims 7-21 and 27-38 were previously canceled without prejudice as being  
4 drawn to non-elected claim groups.

5       By this Response, there are no claims amended or added.

6       Claims 1-6 and 22-26 are pending.

7

---

8       1. (Previously Amended) An assembly comprising:

9            a device physically sized in a form factor of a PCMCIA card, the device  
10          having an interface to communicate with a storage card and memory to store user  
11          data; and

12            a removable storage card associated with a user that alternately enables  
13          access to the user data on the memory when interfaced with the device interface  
14          and disables access to the user data when removed from the device.

15

16       2. (Original) An assembly as recited in claim 1, wherein the storage  
17          card comprises a smart card.

18

19       3. (Original) An assembly as recited in claim 1, wherein the  
20          memory comprises flash memory.

21

22       4. (Original) An assembly as recited in claim 1, wherein the device  
23          stores a user's profile that can be used to configure a computer.

1       5. (Original) An assembly as recited in claim 1, wherein the storage  
2 card stores a passcode and access to the user data in the memory of the device is  
3 enabled upon authentication of a user-supplied passcode to the passcode stored on  
4 the storage card.

5  
6       6. (Original) An assembly as recited in claim 1, wherein the device  
7 stores a public key and the storage card stores a corresponding private key and  
8 access to the user data in the memory of the device is enabled upon verification  
9 that the public key and the private key are associated.

10      [ Claims 7-21: Canceled ]  
11  
12

13      22. (Previously Amended) A computer system, comprising:  
14           a computer having a PCMCIA device reader; and  
15           a smart card secured memory assembly physically sized in a form factor of  
16 a PCMCIA card to compatibly interface with the PCMCIA device reader in the  
17 computer, the smart card secured memory assembly having data memory to store  
18 user data and a removable smart card that alternately enables access to the user  
19 data when present and disables access to the user data when removed.

20  
21      23. (Original) A computer system as recited in claim 22, wherein the  
22 data memory comprises flash memory.

23  
24      24. (Original) A computer system as recited in claim 22, wherein the  
25 smart card stores a passcode and is configured to authenticate a user-supplied

1      passcode entered into the computer as a condition for enabling access to the user  
2      data.

3

4      25. (Original) A computer system as recited in claim 22, wherein:  
5            the smart card stores a first key;  
6            the data memory stores a second key that is associated with the first key;  
7      and  
8            the smart card is configured to authenticate the second key from the data  
9      memory using the first key as a condition for enabling access to the user data.

10

11     26. (Original) A computer system as recited in claim 22, wherein:  
12            the smart card stores a passcode and a private key of a public/private key  
13      pair;  
14            the data memory stores a public key of the public/private key pair; and  
15            the smart card is configured to authenticate a user-supplied passcode  
16      entered into the computer as a condition for enabling access to the private key and  
17      to authenticate the public key from the data memory using the private key as a  
18      condition for enabling access to the user data.
